Summary

AI and data professional with experience in prompt engineering, document intelligence, and large language model workflows. Worked as an Associate Prompt Engineer at Rippey AI, developing and optimizing prompts for automated information extraction from logistics and shipping documents. Experienced with LLMs including GPT-3.5, GPT-4, Claude Sonnet, and Gemini.

Skilled in designing prompt-based extraction systems, validating AI outputs, improving data accuracy, and handling structured and unstructured business documents. Familiar with Python, MongoDB, data processing, and AI-assisted workflow automation. Strong understanding of fine-tuning concepts, LLM behavior, prompt optimization, and data quality evaluation.

Seeking opportunities in AI Training, Prompt Engineering, Data Operations, AI Quality Assurance, Data Analysis, or Python-related roles where AI and data expertise can be leveraged to build reliable intelligent systems.

Experience

Associate Prompt Engineer

04/2025 – 03/2026

Rippey AI

Colorado (Remote)

- Designed and optimized prompts for Large Language Models (LLMs) to extract structured information from logistics and shipping documents.
- Improved extraction accuracy through prompt refinement, testing, and validation.
- Evaluated AI-generated outputs and performed quality assurance to ensure data consistency and correctness.
- Utilized LLM platforms including GPT-3.5, GPT-4, Claude Sonnet, and Gemini.
- Stored and managed prompt configurations using MongoDB.
- Collaborated with existing AI pipelines and contributed to prompt tuning and workflow optimization.
- Assisted in developing document intelligence solutions for automated key-value extraction from unstructured documents.
- Analyzed extraction errors and continuously improved prompt performance based on real-world document variations.
- Worked with structured datasets and business critical logistics information to support automation initiatives.

AI Operations Analyst

09/2023 – 04/2025

Rippey AI

Colorado (Remote)

- Monitored production AI systems and maintained comprehensive evaluation logs, proactively flagging failure patterns and recommending targeted improvements
- Conducted structured comparative evaluations across GPT-4, Claude, and Gemini; documented findings in shared trackers to inform team-wide decision-making
- Collaborated cross-functionally with Product and Engineering to document model behavior, maintain reporting dashboards, and support continuous improvement initiatives
- Managed multiple concurrent project tracks with competing deadlines, consistently delivering on time with strong attention to detail

Sales & Marketing Associate

08/2022 – 12/2022

360 Mails

Nepal

- Led B2B outreach campaigns and managed end-to-end lead generation pipelines, tracking prospects and activities through the full sales funnel
- Conducted market research, prospect identification, and data mining to build qualified partner and client lists for targeted account outreach
- Collaborated with sales and marketing teams on client profiling, outreach strategy, and campaign performance reporting

Education

Bachelor's Degree in Information Management
Tribhuvan University

04/2021 – 10/2025
Kathmandu, Nepal

Skills

- Prompt Engineering | Large Language Models (GPT-4, Claude Sonnet, Gemini) | AI Training | Information Extraction | Document Intelligence | Python | MongoDB | Data Analysis | Data Validation | Data Quality Assurance | Structured Data Extraction | Prompt Optimization | AI Evaluation | Logistics Documentation | Excel | Workflow Automation | Problem Solving

Certificates

- Claude 101 [↗](#)

Projects

RoastBot — AI-Powered Roast Generator [↗](#)

Personal Project

Built and deployed a full-stack AI web application that generates personalized comedy roasts using the Groq LLM API, with dynamic prompt construction based on user inputs (name, occupation, hobby, personal flaw, intensity level)

FIFA World Cup 2026 Predictor [↗](#)

Personal Project

Built an interactive tournament prediction web app covering the full 104-match World Cup format — group stage standings, knockout bracket progression, and champion simulation. Implemented click-to-advance bracket logic, real-time group standings calculation (W/D/L/PTS), live score API integration with match-locking, and JSON export/import for saving predictions. Built with vanilla JavaScript, deployed on Vercel.
